

## **NSAC Student Seminar**

Wednesday, Feb. 19, 2014  
10:00 AM in BRK 1001

Speaker: **Tiffany Marín**

Title: **Synthesis of inorganic nanoparticles and their applications in biomedical area**

Tiffany Marín is a Ph.D student. She researched about synthesis of iron oxide films and received her Bachelor degree in Chemistry from Universidad de Antioquia in 2005. After received her Master degree in Chemical Science from same university in 2008, in which she worked with polymers for fuel cells applications, she joined New Stetic company for 5 years as member of the research and development department. Their research topics included synthesis of polymers and design of new products for dental applications. Currently she works in CIDEMAT group at Universidad de Antioquia; her research has been focused on the synthesis of inorganic nanoparticles and their applications in biomedical area.
