Women in Optics and Nanoscience discussion forum

The STEM (Science, Technology, Engineering, and Math) disciplines and industries so far remain a challenging environment for women. But what hindrances does a woman face to pursue a career in **Optics and Nanoscience**? The event will feature a forum comprising women in various stages in their research journey, led by experienced panelists like **Prof. Alexandra Boltasseva**, **Prof. Dana Weinstein** and **Dr. Swati Pol** who will discuss topics like challenges faced by women in their careers in science, and steps we can take to address the challenges. The participants are encouraged to ask questions and share their experiences. Our goal is to promote personal and professional growth for women through community building and networking opportunities.

Join us on August 5, 2019 Monday
12:30 pm at BRK 1001

Lunch will be provided!
