

Team India - 11/03

Announcements :

> IMPORTANT :

So we will be having Alum family visit us during lab this week. The family will have 2 boys (around 10 years old) and we will have to present our projects to the visitors.

> The presentations will just be an explanation of what we are working on and should be around 3mins - 5mins long for each team.

> The teams can make set of slides to do this, and we can use the link we used last week to make them. It doesn't have to be in detail and just to give you some perspective, I am thinking of around 5 slides for team Medical.

> The explanation should be simple so that every one will be able to understand (including the kids) and try to make it interesting and engaging!

> We will still have PIGS after the session, so make sure that you work on the PIGS so that we can work on our projects after the presentation.

> Once again, there are no specific criteria or time limits, but if you stick to the above, it should be relatively easy to do.

Things to accomplish by the end of the day:

> We will be starting the presentation by 8.30am and hopefully finish it by 9.00am - 9.30am.

> Once this is done, we will do PIGS and then work on our projects as usual,
