

check out the TED talk for a 4-minute overview of the Global Village Construction Set

Friday, Feb. 21  
12:30-1:20pm  
ME 1051

The mission of Open Source Ecology is to create the open source economy. An open source, libre economy is an efficient economy which increases innovation by open collaboration. To get there, OSE is currently developing a set of open source blueprints for the Global Village Construction Set (GVCS) - a set of the 50 most important machines that it takes for modern life to exist - everything from a tractor, to an oven, to a circuit maker. In the process of creating the GVCS, OSE intends to develop a modular, scalable platform for documenting and developing open source, libre hardware - including blueprints for both physical artifacts and for related open enterprises.

# Marcin Jakubowski

creator of the Global Village Construction Set  
one of Time Magazine's 50 Best Inventions of 2012

2012 Senior TED Fellow

2013 Whitehouse Champion of Change
