GLOBAL INNOVATION LAB

I2D EXPOSITION

Innovation for International Development I2D Expo Collaborative platform to match socio-economic challenges to research based solutions

The Shah Family Global Innovation Lab, under Global Engineering Programs & Partnerships, was founded to convene and catalyze consortia – matching world-class capability with the most pressing global challenges. The Lab supports a community of faculty, staff, students, and global partners to respond to bottleneck challenges in international development through engineering innovations and market-driven approaches.

Annually, the I2D Exposition provides a forum for development professionals, faculty, researchers, students and staff to share and learn from each other. This year's Expo will provide a stage to faculty to pitch their solution concepts to Non-Profit partners, in order to combine their strengths for tackling large scale problems. The selected proposals will be supported by Shah Lab Seed Grants.
