

2025 Preclinical Form and Formulation for Drug Discovery Gordon Research Seminar

June 21-22, 2025

University of Southern Maine

25 Bedford St. Portland, Maine, United States

Experimental Frontiers and Computational Strategies in Drug Formulation and Delivery

The Preclinical Form and Formulation for Drug Discovery GRS provides a unique forum for young doctoral and post-doctoral researchers to present their work, discuss new methods, cutting edge ideas, and pre-published data, as well as to build collaborative relationships with their peers. Experienced mentors and trainee moderators will facilitate active participation in scientific discussion to allow all attendees to be engaged participants rather than spectators.

The focus of this GRS is **on innovative experimental and computation strategies advancing formulation design and drug delivery for small, large, and cell-based drug molecules**. Topics of interest include, but are not limited to, analytical characterization, drug delivery challenges, modeling, AI/machine learning, and drug product formulation and screening. Additionally, a panel of industry and academic experts will share their experiences and provide a general perspective on the future of pharmaceutical research.
