Innovation: turning global challenges into opportunities for technical progress

SUSANA DIAZ-AMAYA—HEAD OF BAYER AT CONVERGENCE

Abstract: Innovation doesn't happen in isolation; instead, it relies on strong feedback loops based on trust and shared vision. We are living through an unprecedented time, which forces us (as scientists) to reflect upon our responsibility with society to work intentionally toward mitigating the most pressing global challenges.

We (Bayer) are committed to nurturing the right environment to let innovation happen! It translates into dynamic synergies, diverse perspectives, and fair exchange. Have you wondered what does it take to develop disruptive thinking? Or whether it is an ability reserved for a few unique minds with supernatural talent? Let's talk about your creative power and how to put your skillset and full potential to the service of the greater good. Join the open dialogue about the role of scientists in advancing technical knowledge while keeping a human-centric approach, and explore the opportunities to stretch your abilities and advance your career in the Industry.
